EXPERIMENT – 3

NAME: N.R.Shreya Amudhu REG NO:240701505

USER INTERFACE AND DESIGN

Ex. No. 3a – Prototype with Navigation using Proto.io

Aim

The aim of this experiment is to design a mobile application prototype using Proto.io and implement navigation between different screens. The prototype demonstrates both familiar and unfamiliar navigation elements to study usability and interaction behavior.

Tool Used

Proto.io – https://proto.io/
Proto.io is an interactive prototyping tool used to design mobile application interfaces. It allows designers to create screens, add UI components, and simulate user interactions without writing code.

Procedure

Step 1: Sign Up and Login

• Open the Proto.io website.
• Create a new account or log in with an existing account.

Step 2: Create a New Project

• Click Create New Project.
• Enter the project name.
• Select the device size (Mobile – 360 × 640).
• Click Create.

Step 3: Design the Home Screen

• Add a new screen and name it Home Screen.
• Add UI components such as images and cards.
• Display multiple content blocks with subtitles and icons.
• Add a button 'Go To Profile' at the bottom of the screen.

Interaction:
Trigger → Tap / Click
Action → Navigate to Screen
Destination → Profile Screen

Step 4: Design the Profile Screen

• Create another screen named Profile Screen.
• Add a header bar with page title and icons.
• Add a profile image in the center.
• Add a welcome message.
• Add a button 'Back to Home'.

Interaction:
Trigger → Tap / Click
Action → Navigate to Screen
Destination → Home Screen

Step 5: Preview the Prototype

• Click the Preview button.
• Test the navigation between screens.
• Ensure all buttons and interactions work correctly.

Example 2 – Familiar and Unfamiliar Navigation Elements

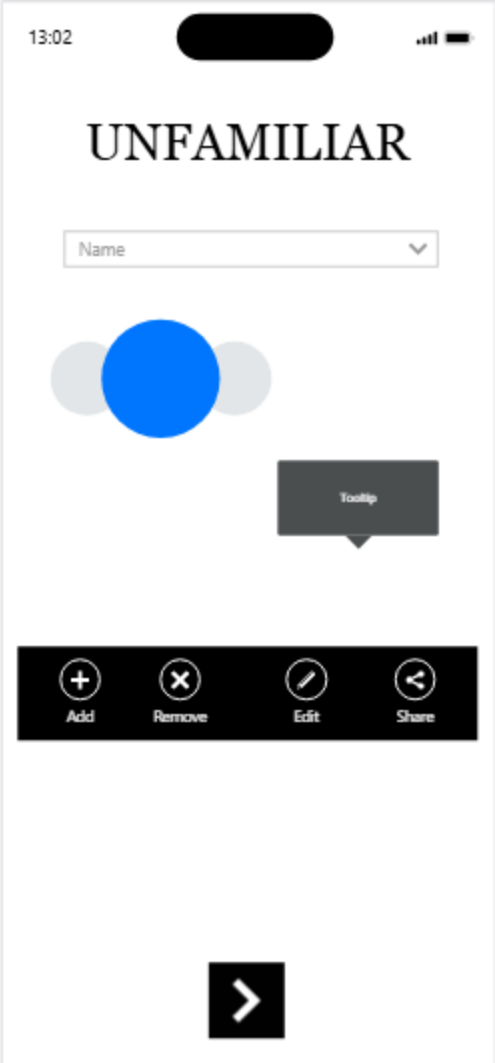
Familiar Navigation Elements

Familiar navigation elements are commonly used UI components that users easily recognize and understand.
Examples include page controller, search bar, progress bar, loader, toggle switch, and navigation buttons.

Unfamiliar Navigation Elements

Unfamiliar navigation elements are new or experimental interface components that users may not immediately recognize. Examples include dropdown heads, map tag, tooltip, toolbar icons, gesture-based navigation, and interactive elements.

Pictures for Familiar and Unfamiliar Navigation



Result

The prototype was successfully created using Proto.io with multiple screens and interactive navigation. The design includes both familiar and unfamiliar navigation elements, helping to understand how users interact with different UI components. The prototype demonstrates basic mobile application navigation and usability concepts.
